Database

- A **database** is *an organized collection of data*.
- The **main purpose** of database is to operate large amount of information by storing, retrieving and managing.
- There are many dynamic websites on the world wide web nowadays which are handled through databases. For example, a model to checks the availability of rooms in a hotel. It is an example of dynamic website that uses database.

RDBMS

- **RDBMS** (*Relational Database Management Systems*) is database relational model based, introduced by E.F. Codd (1970s).
- In RDBMS, data is represented in terms of tuples (rows). It contains number of tables and each table has its own primary key.
- All modern database management systems like SQL, MS SQL Server, IBM DB2, ORACLE, My-SQL and Microsoft Access are based on RDBMS.

SQL

- **SQL** (*Structured Query Language*) is used to communicate with a database. It's the standard language for relational database management systems. SQL statements are used to perform tasks such as update data on a database, or retrieve data from a database.

- Some common relational database management systems that use SQL are: Oracle, Sybase, Microsoft SQL Server, Access, Ingres, etc.

- The standard SQL commands such as "Select", "Insert", "Update", "Delete", "Create", and "Drop" can be used to accomplish almost everything that one needs to do with a database.

PostgreSQL

PostgreSQL, often simply called Postgres, is an object relational database management system (ORDBMS) with an emphasis on extensibility & standards compliance. It's free & open source, released under PostgreSQL lisence.

Postgres has been developed by PostgreSQL Global Development Group since 8th July 1996, written in C.

Getting Started

Download & install PostgreSQL

PostgreSQL Installer

www.postgresql.org/downloads/

Purwadhika
Startup and Coding School

Getting Started

Set as super admin, so we can contacting the server easily without any password:

- Go to `C:\Program Files\PostgreSQL\10\data`
- Open "***pg_hba.conf***" then edit its content.
- Change "md5" to "trust" & save:

```
host all all 127.0.0.1/32 trust
host all all ::1/128 trust
host replication all 127.0.0.1/32 trust
host replication all ::1/128 trust
```

Purwadhika
Startup and Coding School

Activate Server #1

- Open terminal/command prompt

```
$ cd C:\Program Files\PostgreSQL\10\data
$ psql -U postgres
```

```
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation.  All rights reserved.

C:\Users\usr>cd C:\Program Files\PostgreSQL\10\bin

C:\Program Files\PostgreSQL\10\bin>psql -U postgres
psql (10.1)
WARNING: Console code page (437) differs from Windows code page (1252)
         8-bit characters might not work correctly. See psql reference
         page "Notes for Windows users" for details.
Type "help" for help.

postgres=# \l
```

Activate Server #2

- Open terminal/command prompt

```
$ cd C:\Program Files\PostgreSQL\10\bin
$ psql -U postgres
  //password = 12345
```

```
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation.  All rights reserved.

C:\Users\usr>cd C:\Program Files\PostgreSQL\10\bin

C:\Program Files\PostgreSQL\10\bin>psql -U postgres
psql (10.1)
WARNING: Console code page (437) differs from Windows code page (1252)
         8-bit characters might not work correctly. See psql reference
         page "Notes for Windows users" for details.
Type "help" for help.

postgres=# \l
```

Basic Command

Keluar dari PostgreSQL:

```
$ \q
```

Daftar bantuan (help):

```
$ \h
```

Daftar perintah (command):

```
$ \?
```

Menampilkan daftar database:

```
$ \l
```

How to Work With PostgreSQL Database

Purwadhika
Startup and Coding School

Database

Menampilkan daftar database:

```
$ \l
```

Membuat database “karyawan”:

```
$ CREATE DATABASE karyawan;
```

Hapus database “karyawan”:

```
$ DROP DATABASE karyawan;
```

Terhubung ke database “karyawan”:

```
$ \c karyawan
```

Purwadhika
Startup and Coding School

Table

Membuat table “staf_IT”:

```
$ CREATE TABLE staf_IT
- (id INTEGER,
- nama VARCHAR (255),
- usia INTEGER);
```

Menampilkan daftar table:

```
$ \d
```

Lihat struktur table “staf_IT”:

```
$ \d staf_IT
```

Hapus table “staf_IT”:

```
$ DROP TABLE staf_IT;
```

Purwadhika
Startup and Coding School

Add Data Record

Insert data ke table “staf_IT”:

```
$ INSERT INTO staf_IT
- VALUES (1, 'Andi', 24);

$ INSERT INTO staf_IT
- (id, nama, usia) VALUES
- (2, 'Budi', 36);

$ INSERT INTO staf_IT
- (usia, nama, id) VALUES
- (28, 'Caca', 3);
```

Purwadhika
Startup and Coding School

Multiple Data Records

Insert multiple data ke table “staf_IT”:

```
$ INSERT INTO staf_IT VALUES
- (4, 'Dedi', 42),
- (5, 'Euis', 21),
- (6, 'Fafa', 28),
- (7, 'Gilang', 30),
- (8, 'Hani', 27),
- (9, 'Iwan', 29),
- (10, 'Janni', 28);
```

Melihat data record di table “staf_IT”:

```
$ SELECT * FROM staf_IT;
```

Purwadhika
Startup and Coding School

PostgreSQL

Multiple Data Records

```
INSERT 0 10
karyawan=# select * from staf_it;
 id |  nama   | usia
----+---------+------
  1 | Andi    |   24
  2 | Budi    |   36
  3 | Caca    |   28
  4 | Dedi    |   42
  5 | Euis    |   21
  6 | Fafa    |   28
  7 | Gilang  |   30
  8 | Hani    |   27
  9 | Iwan    |   29
 10 | Janni   |   28
(10 rows)
```

Purwadhika
Startup and Coding School

Select

Menampilkan semua data dari tabel “staf_IT”:

```
$ SELECT * FROM staf_it;
```

Menampilkan data nama & usia dari “staf_IT”:

```
$ SELECT nama, usia FROM staf_it;
```

Menampilkan hanya data nama dari “staf_IT”:

```
$ SELECT nama FROM staf_it;
```

Purwadhika
Startup and Coding School

Where

Menampilkan semua data id, nama & usia dari tabel “staf_IT”, yang memiliki nilai usia = 28:

```
$ SELECT * FROM staf_IT
- WHERE usia = 28;
```

Menampilkan semua data id, nama & usia dari “staf_IT” , yang memiliki nomor id genap:

```
$ SELECT * FROM staf_IT
- WHERE id % 2 = 0;
```

Purwadhika
Startup and Coding School

And & Or

Menampilkan semua data id, nama & usia dari tabel “staf_IT”, yang usia=28 atau nama=Andi:

```
$ SELECT * FROM staf_it
- WHERE usia = 28 OR
- nama = 'Andi';
```

Menampilkan semua data id, nama & usia dari “staf_IT” , yang memiliki usia antara 24-30:

```
$ SELECT * FROM staf_it
- WHERE usia > 24 AND
- usia < 30;
```

Purwadhika
Startup and Coding School

PostgreSQL

Order

```
$ SELECT * FROM staf_it WHERE
- usia < 29 ORDER BY usia;

$ SELECT * FROM staf_it WHERE
- usia < 29 ORDER BY usia ASC;

$ SELECT * FROM staf_it WHERE
- usia < 29 ORDER BY usia DESC;

$ SELECT * FROM staf_it WHERE
- usia < 29 ORDER BY nama, usia;
```

Purwadhika
Startup and Coding School

Update

Update semua data usia di tabel “staf_IT”:

```
$ UPDATE staf_it
- SET usia = 26;
```

Update data tertentu di tabel “staf_IT”:

```
$ UPDATE staf_it
- SET usia = 32
- WHERE nama = 'Andi';
```

Purwadhika
Startup and Coding School

Delete

Hapus semua data di tabel “staf_IT”:

```
$ DELETE FROM staf_it;
```

Hapus data tertentu di tabel “staf_IT”:

```
$ DELETE FROM staf_it
- WHERE nama = 'Andi';
```
